Abstract

Modular service device

In order to specify a service device (1), which can be equipped with at least one connection module (7a-7d) and has a contact means (16a, 16b), and in the case of which the possibly voltage-carrying contact means (16a, 16b) for the purpose of making contact with the connection module (7a-7d) which can be coupled and decoupled is intended to be protected against unintentional touching contact using simple means, provision is made for an insulating means (19a, 19b) to be arranged on the end and/or longitudinal side of the contact means (16a, 16b).
